How Does it Grow? Seed to Sunflower

Ian Smith

The Sunflower grows from a seed.

The Sunflower starts to grow in the Spring.

The roots grow down into the soil.

A small shoot pushes through the soil and grows up towards the sunlight.

The stem starts to grow.

The little plant is now called a seedling.

The leaves start to grow.

The sunflower grows big yellow petals.

The sunflower needs air, water and sun to grow tall.

Sunflowers are fully grown in 3 months.

The sunflower moves to face the sun.

The flower begins to die.

The seeds begin to grow.

The sunflower seeds fall to the ground.
In Spring a new Sunflower grows.

Sunflower seeds are used for food.

Sunflower seeds are good for you.

HOW TO GROW A SUNFLOWER
